Appendix

Figure S1. Flowchart with the inclusion and exclusion criteria of the study population

Figure S2. Directed Acyclic Graph for the possible causal effect of obesity on COVID-19 outcomes used to adjust the Cox proportional hazard models

Table S1. Characteristics of individuals excluded from the study due to missing information on BMI, smoking status and/or the MEDEA deprivation index

Table S2. Characteristics of the study participants by multi-state transition

Figure S3. Association between body mass index and the risk of COVID-19 outcomes with different types of model-adjustment, allowing for non-linear effects, with 95% CIs

Table S3. Hazards ratios of COVID-19 outcomes related to body mass index, with 95% CIs, for the unadjusted, adjusted for age and sex and fully adjusted models

Table S4. Hazards ratios of COVID-19 outcomes related to body mass index, with 95% CIs, stratified by age and sex

Figure S4. Association between body mass index and the risk of COVID-19 diagnosis, allowing for non-linear effects, with 95% CIs, stratified by calendar month

Table S5. Hazard Ratios of the risk of COVID-19 diagnosis related to body mass index, allowing for non-linear effects, with 95% CIs, stratified by calendar month

Figure S5. Hazard Ratios of COVID-19 outcomes related to body mass index in categories, with 95% CIs

Figure S6. Association between body mass index and the risk of COVID-19 outcomes, allowing for non-linear effects, with 95% CIs, after multiple imputation of missing data on BMI, smoking status, and/or the MEDEA deprivation index

Table S6. Hazards ratios of COVID-19 outcomes related to body mass index, with 95% CIs, after multiple imputation of missing data on BMI, smoking status, and/or the MEDEA deprivation index

Figure S7. Association between body mass index and the risk of COVID-19 outcomes, allowing for non-linear effects, with 95% CIs among people with a BMI measurement not older than five years prior to the index date

Table S7. Hazards ratios of COVID-19 outcomes related to body mass index, with 95% CIs among people with a BMI measurement not older than five years prior to the index date

Figure S1. Flowchart with the inclusion and exclusion criteria of the study population

Abbreviations: BMI: Body Mass Index; COVID-19: Coronavirus Disease 2019; MEDEA: “Mortalidad en áreas pequeñas Españolas y Desigualdades Socioeconómicas y Ambientales”; SIDIAP: Information System for Research in Primary Care.

Figure S2. Directed Acyclic Graph for the possible causal effect of obesity on COVID-19 outcomes used to adjust the Cox proportional hazard models

Notes: Green lines indicate a possible pathway between the exposure and outcome of interest.

Abbreviations: COVID-19: Coronavirus Disease 2019; MEDEA: “Mortalidad en áreas pequeñas Españolas y Desigualdades Socioeconómicas y Ambientales”; SES: Socioeconomic status.

Table S1. Characteristics of individuals excluded from the study due to missing information on BMI, smoking status and/or the MEDEA deprivation index

	Overall	BMI recorded and complete data on covariates	Missing data on BMI ^a or covariates ^b	SMD	Missing BMI ^a	BMI recorded but missing data on covariates ^b
N	4,619,841	2,524,926	2,094,915		1,357,553	737,362
BMI, median (IQR)	26.5 (23.5-30.0)	26.5 (23.5-29.9)	26.6 (23.6-30.1)	0.260	-	26.6 (23.6-30.1)

Notes: Models are adjusted for age, sex, smoking status and the MEDEA deprivation index. These models were stratified by calendar month to account for the violation of the assumption of proportionality for age in the first transition.

Abbreviations: BMI: Body mass index; CI: Confidence interval; COVID-19: Coronavirus Disease 2019.

Figure S5. Hazard Ratios of COVID-19 outcomes related to body mass index in categories, with 95% CIs

Notes: Hazard ratios are relative to normal or underweight ($BMI < 18.5 \text{ kg/m}^2$ and between ≥ 18.5 and $< 25 \text{ kg/m}^2$). The overweight category includes BMIs between ≥ 25 and $< 30 \text{ kg/m}^2$ and for the obesity category $BMI \geq 30 \text{ kg/m}^2$. Models are adjusted for age, sex, smoking status and the MEDEA deprivation index.

Abbreviations: BMI: Body mass index; CI: Confidence interval; COVID-19: Coronavirus Disease 2019; HR: Hazard ratio.

Figure S6. Association between body mass index and the risk of COVID-19 outcomes, allowing for non-linear effects, with 95% CIs, after multiple imputation of missing data on BMI, smoking status, and/or the MEDEA deprivation index

Notes: Models are adjusted for age, sex, smoking status and the MEDEA deprivation index. For the multiple imputations we used predictive mean matching, with 5 imputations drawn.

Abbreviations: BMI: Body mass index; CI: Confidence interval; COVID-19: Coronavirus Disease 2019; MEDEA: “Mortalidad en áreas pequeñas Españolas y Desigualdades Socioeconómicas y Ambientales”.

47	1.38 (1.22-1.56)	3.26 (2.71-3.93)	3.14 (2.83-3.49)	1.41 (1.11-1.79)	2.02 (1.60-2.55)
50	1.41 (1.22-1.64)	3.35 (2.61-4.31)	3.40 (3.01-3.84)	1.54 (1.17-2.04)	2.47 (1.84-3.31)

Notes: Models are adjusted for age, sex, smoking status and the MEDEA deprivation index. For the multiple imputations we used predictive mean matching, with 5 imputations drawn.

Abbreviations: BMI: Body mass index; CI: Confidence interval; COVID-19: Coronavirus Disease 2019; MEDEA: “Mortalidad en áreas pequeñas Españolas y Desigualdades Socioeconómicas y Ambientales”.

Figure S7. Association between body mass index and the risk of COVID-19 outcomes, allowing for non-linear effects, with 95% CIs among people with a BMI measurement not older than five years prior to the index date

Notes: Models are adjusted for age, sex, smoking status and the MEDEA deprivation index
 Abbreviations: BMI: Body mass index; CI: Confidence interval; COVID-19: Coronavirus Disease 2019.

Table S7. Hazards ratios of COVID-19 outcomes related to body mass index, with 95% CIs among people with a BMI measurement not older than five years prior to the index date

BMI values (kg/m^2)	From General Population		From diagnosed with COVID-19		From hospitalised with COVID-19
	To diagnosed with COVID-19	To hospitalised with COVID-19	To hospitalised with COVID-19	To death	To death
16	0.81 (0.79-0.84)	0.61 (0.55-0.67)	0.55 (0.49-0.61)	1.32 (1.11-1.58)	1.20 (1.01-1.43)
19	0.90 (0.89-0.92)	0.79 (0.75-0.82)	0.74 (0.70-0.78)	1.15 (1.05-1.26)	1.08 (0.99-1.16)
