

Supplementary Table 9. HEM gene overrepresentation analysis in gene co-expression network modules of hemorrhoidal tissue.

The overrepresentation analysis was performed using Fisher's exact test with the alternative hypothesis that the true odds ratio is greater than one.

Module: network module of co-expressed genes in hemorrhoids tissue; **N HEM genes:** number of HEM candidate genes in module; **N genes:** total number of genes in module; **HEM gene frac, %:** percentage of HEM candidate genes in a given module; **OR:** odds ratio; **FDR:** *P*-value after FDR correction.

| Module | N HEM genes | N genes | HEM gene frac, % | OR | P FDR |
|--------|-------------|---------|------------------|------|---------|
| M1 | 121 | 3975 | 3,0 | 1,65 | 6,4E-05 |
