

Supplementary Table 3. Number of fine-mapped variants in 95% credible sets.

Variants in 95% fine-mapped credible sets for 102 susceptibility loci associated with HEM at genome-wide significance ($P_{\text{Meta}} < 5 \times 10^{-8}$). For 6 loci, the 95% credible set consisted of a single variant ('single variant credible sets'), and for 96 others the credible set consisted of multiple variant.

Size of 95% credible set	1	2-5	6-10	11-20	21-50	>50
Number of loci	6	19	11	18	26	22

Locus: number of susceptibility locus according to **Supplementary Table 2. SNP:** variants in the 95% credible sets (see **Online Methods**). Variants were sorted by the posterior probability of association, and variants were added to the 'credible set' of associated variants until the sum of their posterior probability exceeded 95%. Rs-numbers retrieved from NCBI's dbSNP build v150 (genome build hg19); **CHR:** chromosome; **BP:** base pair position; **Posterior probability:** posterior probability of causality to each SNP variant.
