

Supplementary Table 5: Results of subset-based pleiotropy meta-analysis (SBM).

Lead SNP (rsID): rs ID retrieved from NCBI's dbSNP build v150; **CHR:** chromosome; **BP:** base pair position; **start-end:** left/right association boundaries for each lead SNP defined by FUMA (see **Supplementary Note**); **Phenotype(s):** subset of phenotypes from SBM with genome-wide significance ($P_{SBM} < 5 \times 10^{-8}$); **P:** Final P -value (P_{SBM}) from two-sided statistic for the detection of potential effects in opposite directions (combined from two-sided statistics P subset1 and P subset2), i.e. adjusted (disease-combined) P -value (P_{SBM}) from SBM (see **Online Methods**); **Phenotype(s) subset 1:** risk ($OR > 1$) disease subset from SBM; **P subset 1:** P -value from two-sided statistic across phenotype(s) of subset 1; **OR (95% CI) subset 1:** odds ratio and corresponding 95% confidence interval of phenotype(s) from subset 1; **Phenotype(s) subset 2:** protective ($OR < 1$) disease subset from SBM; **P subset 2:** P -value from two-sided statistic across phenotype(s) of subset 2; **OR (95% CI) subset 2:** odds ratio and corresponding 95% confidence interval of phenotype(s) from subset 2.
