

Supplementary Table 6. Significant genetic correlations between HEM and other traits estimated by genome-wide LD Score Regression (LDSC).

Trait: the name of the complex trait or disease being compared to HEM for genetic correlation; **rg:** genetic correlation between HEM and each trait, ranging from -1 to 1. rg>0 represents a positive genetic correlation; **se:** standard error of rg; **z score:** the z-score from statistical test of genetic correlation; **P FDR:** the z-score from statistical test of genetic correlation after FDR correction at $\alpha=0.05$; **N total:** the sample size being included in the genetic analysis of each trait; **Cohort:** the data source from which the summary statistic of the trait were extracted.
