

Supplementary Table 7. Summary of HEM genes mapping and prioritization.

This table contains detailed information of all 819 HEM mapped genes and the criteria for gene prioritization (see Results and Online Methods).

Gene symbol: gene ID extracted from HGNC (Human Gene Nomenclature Committee). **EnsemblID:** gene ID extracted from Ensembl database. **EnsemblID:** gene ID extracted from Ensembl database. **GRCh38 p13:** Gene type: the biotype of the gene annotated by Ensembl database. **GRCh38 p13:** Locus number: the sequential number of the HEM HRA loci. **Lead SNP (rsID):** rs ID retrieved from NCBI's dbSNP build v150. **Prioritized HEM genes:** a list of genes that are prioritized by the gene mapping algorithm. **Gene mapping:** the gene mapping algorithm (FUMA, MAGMA, DEPICT, FUMA, MAGMA, DEPICT, FUMA, MAGMA, DEPICT) prioritized genes. **DEPICT prioritized:** indicating whether a gene is prioritized by DEPICT gene prioritization algorithm (FUMA, MAGMA, DEPICT). **Linked to fine mapped variant (probability>95%):** Genes that are linked to a fine mapped variant (probability > 95%) by the gene mapping algorithm. **Expression in HEM tissue:** Genes that were expressed (detected "C") or not expressed (detected "N") in HEM tissue. Otherwise, expressed genes were highlighted with either "C" (for conserved genes) or "N" (for non-conserved genes) according to the RNA-seq analysis results comparing tissue expression profiles between HEM patients and healthy controls. Genes were labeled with "LQ2" genes highly expressed (in upper quartile). **WGCNA module:** indicating whether a gene is included in any of the significant gene co-expression modules of HEM tissue (M1, M4, M7, see Online Methods) as well as "not" after the module names (e.g., M1, M4, M7) represents a gene within the gene co-expression module. **Mouse phenotypes from MGI:** type of mammalian phenotype categories that are associated with the gene mutations from Mouse Genome Informatics Database (MGI). **OMIM Phenotypes:** a list of genetic disorders that are associated with the gene mutations. Information extracted from Online Mendelian Inheritance in Man (OMIM). "N/A" data is not available. <http://www.ebi.ac.uk/EMBL>

Gene symbol	EnsemblID	EnsemblID	Gene type	Locus number	Lead SNP (rsID)	Prioritized HEM genes	Gene mapping				Gene prioritization					
							FUMA_positonal	FUMA_eQTL	MAGMA	DEPICT	DEPICT prioritized	Linked to fine mapped variant (probability>95%)	Expression in HEM tissue	WGCNA module	Mouse phenotypes from MGI	OMIM Phenotypes
