

Supplementary Table 8. Gene set and tissue enrichment analyses of HEM genesThis table contains all tissues and pathways if they are significantly enriched in at least one out of three analytic tools (FUMA, MAGMA or DEPICT; **Online Methods**).

Genesets: The enriched pathway or tissue. Gene-sets were only reported if their FDR corrected P-values were lower than 0.05 in at least one of the three methods. **Category:** GTEx tissue: 30 GTEx general tissue types using data from GTEx release v7 database; GO_BP: gene ontology biological process, GO_MF: gene ontology molecular function and GO_CC: gene ontology cellular component from Molecular Signature Database; **P.FDR.FUMA:** the P-value from the statistical test of enrichment in FUMA after FDR correction for multiple comparisons at $\alpha=0.05$; **P.FDR.MAGMA:** the P-value from the statistical test of enrichment in MAGMA after FDR correction for multiple comparisons at $\alpha=0.05$; **P.FDR.DEPIC:** the P-value from the statistical test of enrichment in DEPICT after FDR correction for multiple comparisons at $\alpha=0.05$. “-”: data is not available.
