

Suppl. Fig. 1

Supplemental Figure 1. Human Nasal Bacterial Abundance and Composition are Stable. Quantification of (A) total nasal bacteria, (B) *S. epidermidis*, (C) *C. accolens*, and (D) *C. pseudodiphtheriticum* in human subjects. Both nares were swabbed and bacterial counts quantified using standard microbiology techniques on day 1 and day 3. n=6 subjects. Bars are mean ± SEM

Suppl. Fig. 2

Supplemental Figure 2. Baseline Nasal Swab Bacterial Counts and Species Diversity in Non-CF and CF Subjects. (A) Bacterial counts obtained with nasal swabs. (B) Bacterial species diversity. Diversity was determined by summing individual bacterial species from each subject. Each data point indicates nasal swab data from a different subject. Horizontal bars represent mean \pm SEM. * denotes $P < 0.05$.
