

## Supplementary Figure 1

Schematic overview of the used bioinformatics tools for WGS analysis. All code and scripts used for analysis of the WGS data are available at GitHub:

BWA (version 0.7.17): <http://bio-bwa.sourceforge.net/>

STRELKA (version 1.0.14): <https://github.com/Illumina/strelka>

GRIDSS (version 2.8.3): <https://github.com/PapenfussLab/gridss>

VIRUSBreakend (GRIDSS subtool):

[https://github.com/PapenfussLab/gridss/blob/master/VIRUSBreakend\\_Readme.md](https://github.com/PapenfussLab/gridss/blob/master/VIRUSBreakend_Readme.md)

AMBER (version 3.3): <https://github.com/hartwigmedical/hmftools/tree/master/amber>

COBALT (version 1.7): <https://github.com/hartwigmedical/hmftools/tree/master/count-bam-lines>

PURPLE (version 2.43): <https://github.com/hartwigmedical/hmftools/tree/master/purity-ploidy-estimator>

LINX (version 1.7): <https://github.com/hartwigmedical/hmftools/tree/master/sv-linx>

CHORD (version 60.02\_1.03): <https://github.com/UMCUGenetics/CHORD>
