18 **Supplemental Figure 1**

19 **Supplemental Figure 1.** Validation of top DEGs identified by whole transcriptome analysis. Changes
 20 in gene expression detected by RNA-sequencing were reproduced using RT-qPCR for the top 4 gene
 21 transcripts. a) Gene expression measured using RNA-sequencing for *STAC*, *CISH*, *CD4* and *FN1*. Log2
 22 of TMM normalised counts calibrated to *YWHAZ* b) Gene expression measured using RT-qPCR for
 23 *STAC*, *CISH*, *CD4* and *FN1* $2^{-\Delta\Delta CT}$, *YWHAZ* as housekeeping gene, in duplicate. Each data point
 24 represents gene expression in a single patient. Horizontal dotted line shows group median, error bars
 25 depict data range.
