Table S3: eQTLs identified at disease level and after cross-disease meta-analysis. Shared disease susceptibility—eQTL associations are indicated. Conditioning SNPs for the eQTL data are indicated where appropriate. Where an eQTL is identified at the disease level and also in cross-disease meta-analysis, this is indicated as “Stable eQTL.” eQTLs that are newly identified after cross-disease meta-analysis are labelled “New eQTL.”
