

Appendix 4 Detailed information of classes with potential clusters (3 or more newly seropositive children at T3) in schools with 2 or more classes with clusters

School	School level	N of pupils: T1+/T2+/T3+ negative missing*	RT-PCR positive in T2-T3		Quarantine/ isolation in T2-T3		Information** (unrelated time points signify >2 weeks interval between all diagnosed or potential infections)	Possible index cases of individual pupils***			Transmission in class plausible ****	Comments
			Teacher	Child	Teacher	Child		Teacher	Child	House- hold		
1	lower	1/0/4 10 3	0	0	0	3	3 pupils in quarantine: n=1 due to PCR+ teacher not related to regular school, n=2 both due to PCR+ household member (HM) of one of the 2 pupils, with whom both had close contact	0	0	1	1	
	lower	1/0/3 5 11	1	0	1	7	7 pupils in quarantine: n=5 due to PCR+ HM and n=2 for unknown reasons	0	0	1	1	
	lower	0/0/4 8 8	0	0	0	4	4 pupils in quarantine: n=1 due to PCR+ HM, n=1 due to PCR+ teacher not related to regular school, n=1 due to PCR+ family friend, n=1 for unknown reasons	0	0	1	0	
	lower	1/0/4 10 3	0	1	1	4	1 pupil in isolation: PCR+ for unknown reasons. 3 pupils in quarantine: n=2 each due to PCR+ HM (unrelated time points), n=1 for unknown reason	0	0	1	0	
2	lower	0/0/4 8 11	0	2	0	3	2 pupils in isolation: n=1 first in quarantine due to PCR+ HM then PCR+, n=1 PCR+ due to symptoms. 2 pupils in quarantine at unrelated time points each due to PCR+ HM	0	0	1	1	Outbreak in grade 5 class non-participating in this study: 8 pupils PCR+, not clear where Index came from, family of 1 pupil and HM of another pupil were tested PCR+
	middle	0/0/4 10 6	0	0	0	1	1 pupil in quarantine due to PCR+ HM	0	0	1	?	
	middle	0/0/3 3 16	0	0	0	2	2 pupils in quarantine at unrelated time points each due to PCR+ HM	0	0	1	0	
3	lower	0/0/3 7 9	1	1	1	whole class	Outbreak in a parallel class due to PCR+ child (probably infected by HM; index HM with severe symptoms but not tested). Then teacher and several children PCR+ in this and the parallel classes, the remaining children not tested; both classes (including this one) quarantined	0	0	1	1	Transmission of virus among pupils in the lower school level class probable, primary Index case most probably HM of a child.

	middle	1/1/3 12 5	0	0	0	1	1 pupil in quarantine due to travel abroad after fall vacation	0	0	0	?	
	middle	1/1/3 7 8	1	3	1	3	1 teacher in isolation PCR+, 3 pupils in isolation, each PCR+ due to PCR+ HM (unrelated time points)	?	0	1	1	
4	lower	1/0/3 2 15	1	3	whole school	whole school	3 pupils in isolation: n=1 PCR+ for unknown reason; n=1 due to PCR+ HM; n=1 PCR+ with symptoms	0	?	1	1	School outbreak with the whole school in quarantine
	middle	1/1/3 7 8	1	7			1 teacher PCR+, 3-6 days later PCR+ pupil tested because of loss of taste. Testing of the whole class 2 days later - 6 further pupils PCR+, none with symptoms, 5 pupils PCR-	1	0	0	1	
	middle	0/1/3 7 12	1	6			6 pupils in isolation: n=1 in quarantine due to PCR+ HM, then tested PCR+ in the outbreak testing together with 1 teacher and 5 further pupils PCR+	?	?	1	1	
5	lower	1/1/3 3 13	0	0	0	0	No diagnosed or suspected SARS-CoV-2 infections known	?	?	?	?	
	middle	0/0/4 6 11	0	0	0	0	No diagnosed or suspected SARS-CoV-2 infections known	?	?	?	?	
6	middle	0/0/3 13 8	0	8	1	whole class	First a few children PCR+, then in total 8 PCR+ shortly afterwards. Subsequently class in quarantine, teacher then tested PCR- but later tested seropositive	0	1	?	1	
	middle	1/1/3 3 15	0	3	0	3	3 pupils in quarantine at unrelated time points each due to PCR+ HM	0	0	1	0	
7	upper	0/1/3 10 3	0	2	0	2	2 pupils in isolation at unrelated time points for unknown reasons	0	?	?	0	A class not participating in this study in quarantine during Christmas break due to several PCR+ pupils
	upper	0/0/3 7 5	0	1	0	1	1 pupil in isolation for unknown reasons	0	?	?	?	
8	lower	0/0/3 4 15	0	1	0	1	1 pupil in isolation: infected by a teacher not related to the regular school, whole class tested PCR-	0	0	0	?	
	middle	1/0/3 12 8	0	1	0	4	1 pupil in isolation: infected by a teacher not related to the regular school. 3 pupils in quarantine at unrelated time points: n=1 due to PCR+ HM, n=2 of for unknown reasons	0	0	1	0	
9	middle	2/0/3 8 11	0	1	0	6	1 pupil in isolation: PCR+ during quarantine due to a PCR+ HM. 6 pupils in quarantine all due to PCR+ HM	0	0	1	1	Parallel class not participating in this study in quarantine

	middle	0/1/4 1 18	0	0	0	2	2 pupils in quarantine at unrelated time points due to PCR+ HM	0	0	1	0	due to infected teacher and class assistant
10	lower	1/0/5 9 9	0	0	0	5	1 pupil in isolation due to PCR+ HM. 4 pupils in quarantine: n=3 each due to PCR+ HM, n=1 due to PCR+ contact	0	0	1	1	
	lower	0/0/3 12 8	0	0	0	3	3 pupils in quarantine: n=1 due to PCR+ teacher not related to the regular school, n=2 both due to PCR+ HM of one of the 2 pupils, with whom both had close contact	0	0	1	1	

HM – household member.

* T1+ denotes the number of seropositive pupils at T1 (June-July 2020); T2+ denotes the number of newly seropositive pupils at round T2 (October-November 2020); T3+ denotes the number of newly seropositive pupils at T3 (March-April 2021); *negative* denotes the number of seronegative pupils at round T3; *missing* denotes previously non-seropositive pupils who were not tested at T3. Total class size can be calculated by the sum of T1+, T2+, T3+, negative, and missing.

** Dates reported denote month and day(s). September to December refer to the year 2020, January to April – to the year 2021.

*** Possible index cases of individual diagnosed or suspected (RT-PCR+ or quarantined) children in the class.

**** Transmission among pupils/teachers in class was considered possible (1) when the time between RT-PCR diagnoses or quarantine start dates was 2 weeks or below, and not probable (0) if longer. Transmission was defined as unclear (?) if no or only a single child was diagnosed or quarantined in the class according to the interview information.
