COVID-19 vaccination policy

Metrics included in the dataset of COVID-19 vaccination policy

- (1) **Authorization status.** Status includes licensure in use, emergency use authorization, conditional marketing, special access route, and recipients of COVAX or other countries.
- (2) **Indications and contraindications.** People who could and should not get vaccinated against COVID-19, recommended by governments/health departments.
- (3) **Additional/booster dose policy.** If the government/health department gives a clear definition of an additional/booster dose, we adopted it. Otherwise, we used the definition by the United States Centers for Disease Control and Prevention¹.

3.1 **Target population.** Individuals who are eligible for a COVID-19 vaccine additional/booster shot.

3.2 **Interval.** The time between the completion of primary immunization and additional/booster shots.

- (5) **Whether provide at no cost to individual vaccine recipients.**

Table S1. Authorization information of COVID-19 vaccines by technical platforms and country.

Vaccine	Authorization status	Use status	Country lists
Adenovirus vectored vaccine			
1. Convidecia	Conditional marketing	In use	China
	Emergency Use Authorization	In use	Argentina, Chile, Ecuador, Indonesia, Malaysia, Mexico, Pakistan
2. Covishield	Conditional marketing	Currently not in use	Canada
	Emergency Use Authorization	In use	Argentina, Bahrain, Bangladesh, Barbados, Bhutan, Botswana, Brazil, Cambodia, Cameroon, Comoros, Dominica, Egypt, Ghana, India, Iran, Laos, Madagascar, Maldives, Mauritius, Mexico, Morocco, Nepal, Nicaragua, Nigeria, Niger, Oman, Moldova, Saint Vincent and the Grenadines, Seychelles, South Africa, South Korea, Sri Lanka, Ukraine, Ukraine, Uzbekistan
	Recipients of COVAX or other countries	In use	Afghanistan, Angola, Ethiopia, Grenada, Guinea, Lesotho, Liberia, Malawi, Mali, Mauritania, Papua New Guinea, Saint Kitts and Nevis, Somalia, Suriname, Syria, Togo, Uganda, Yemen, Zambia, Trinidad and Tobago
3. Janssen COVID-19 Vaccine	Conditional marketing / Emergency Use Authorization	Currently not in use	Denmark, Finland, Norway, Sweden, India
	Conditional marketing	In use	Austria, Bulgaria, Canada, Croatia, Cyprus, Czechia, Estonia, France, Germany, Greece, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Romania, Slovakia, Slovenia, Spain
	Emergency Use Authorization	In use	Antigua and Barbuda, Bahamas, Bahrain, Bangladesh, Belgium, Belize, Bolivia, Botswana, Brazil, Cameroon, Chile, Colombia, Comoros, Cote d'Ivoire, Egypt, Ghana, Guinea, Hungary, Indonesia, Kenya, Kuwait, Laos, Lesotho, Libya, Madagascar, Malaysia, Marshall Islands, Mexico, Micronesia, Namibia, Nigeria, Oman, Philippines, Poland, Portugal, Rwanda, Saint Vincent and the Grenadines, Saudi Arabia,

			South Africa, South Korea, Sudan, Switzerland, Thailand, Togo, Tunisia, United Kingdom, United States, Vietnam, Zambia, Zimbabwe, Trinidad and Tobago
	Recipients of COVAX or other countries	In use	Afghanistan, Algeria, Benin, Central African Republic, Djibouti, Ethiopia, Gambia, Liberia, Malawi, Mali, Mauritania, Nepal, Palau, Papua New Guinea, Senegal, Sierra Leone, Somalia, South Sudan, Tajikistan, Tanzania, Yemen
4. Sputnik Light	Emergency Use Authorization	In use	Belarus, Mongolia, Venezuela
	Licensure	In use	Russia
5. Sputnik V	Emergency Use Authorization	Currently not in use	Maldives
	Emergency Use Authorization	In use	Albania, Algeria, Antigua and Barbuda, Argentina, Armenia, Azerbaijan, Bahrain, Bangladesh, Belarus, Bolivia, Bosnia and Herzegovina, Ecuador, Egypt, Gabon, Ghana, Guatemala, Guinea, Guyana, Honduras, Hungary, India, Iran, Iraq, Jordan, Kazakhstan, Kyrgyzstan, Libya, Mexico, Mongolia, Montenegro, Myanmar, Namibia, Nepal, Nicaragua, Nigeria, North Macedonia, Oman, Pakistan, Paraguay, Philippines, Moldova, Saint Vincent and the Grenadines, San Marino, Serbia, Seychelles, Slovakia, Sri Lanka, Syria, Tunisia, Turkmenistan, United Arab Emirates, Uzbekistan, Venezuela, Vietnam, Zimbabwe
	Licensure	In use	Russia
	Recipients of COVAX or other countries	In use	Angola
6. Vaxzevria	Conditional marketing	Currently not in use	Denmark, Norway, Sweden
	Conditional marketing	In use	Austria, Bulgaria, Canada, Croatia, Cyprus, Czechia, Estonia, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Romania, Slovakia, Slovenia, Spain,

			Vietnam
Emergency Use Authorization	In use		Albania, Andorra, Antigua and Barbuda, Argentina, Armenia, Australia, Azerbaijan, Bahamas, Belgium, Belize, Benin, Bolivia, Bosnia and Herzegovina, Botswana, Brazil, Brunei, Burkina Faso, Cabo Verde, Chile, Colombia, Costa Rica, Cote d'Ivoire, Dominica, Dominican Republic, Ecuador, Egypt, El Salvador, Georgia, Guatemala, Guyana, Honduras, Hungary, Indonesia, Iraq, Japan, Kenya, Kuwait, Kyrgyzstan, Lebanon, Libya, Malaysia, Mexico, Mongolia, Montenegro, Namibia, Nauru, Nicaragua, Niger, North Macedonia, Oman, Pakistan, Panama, Paraguay, Peru, Philippines, Poland, Portugal, Saint Lucia, Saint Vincent and the Grenadines, Samoa, Saudi Arabia, Serbia, Thailand, Tunisia, Ukraine, United Arab Emirates, United Kingdom, Uruguay
Recipients of COVAX or other countries	In use		Afghanistan, Algeria, Central African Republic, Democratic Republic of the Congo, Eswatini, Ethiopia, Fiji, Gambia, Guinea-Bissau, Jamaica, Jordan, Kiribati, Malawi, Mauritania, Mozambique, Papua New Guinea, Republic of the Congo, Rwanda, Sao Tome and Principe, Senegal, Sierra Leone, Solomon Islands, Somalia, South Sudan, Sudan, Tajikistan, Timor-Leste, Togo, Tonga, Tuvalu, Vanuatu, Zambia
Conjugate vaccine			
1. Soberana 02	Emergency Use Authorization	In use	Cuba, Iran, Nicaragua
DNA vaccine			
1. ZyCoV-D	Emergency Use Authorization	Currently not in use	India
Inactivated vaccine			
1. BBIBP-CorV	Conditional marketing	In use	China
	Emergency Use	In use	Antigua and Barbuda, Argentina, Armenia, Bahrain, Bangladesh, Barbados, Belarus, Belize, Bolivia,

	Authorization		Brunei, Cambodia, Cameroon, Comoros, Dominica, Dominican Republic, Egypt, Equatorial Guinea, Gabon, Gambia, Georgia, Guyana, Hungary, Indonesia, Iran, Iraq, Jordan, Kenya, Kyrgyzstan, Laos, Lesotho, Madagascar, Maldives, Mauritania, Mauritius, Mongolia, Montenegro, Morocco, Namibia, Nepal, Niger, Nigeria, North Macedonia, Oman, Pakistan, Paraguay, Peru, Philippines, Republic of the Congo, Saudi Arabia, Senegal, Serbia, Seychelles, Sri Lanka, Suriname, Thailand, United Arab Emirates, Venezuela, Vietnam, Zimbabwe, Trinidad and Tobago
	Recipients of COVAX or other countries	In use	Afghanistan, Angola, Burundi, Chad, Cote d'Ivoire, Ethiopia, Guinea-Bissau, Kazakhstan, Kiribati, Lebanon, Mozambique, Papua New Guinea, Rwanda, Sierra Leone, Solomon Islands, Somalia, Sudan, Tanzania, Vanuatu, Zambia
	Special access route	In use	Singapore
2. CoronaVac	Conditional marketing	In use	China
	Emergency Use Authorization	Currently not in use	Panama
	Emergency Use Authorization	In use	Albania, Azerbaijan, Bangladesh, Benin, Bosnia and Herzegovina, Botswana, Cambodia, Chile, Colombia, Djibouti, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Georgia, Guinea, Indonesia, Indonesia, Kazakhstan, Malaysia, Mexico, Nepal, North Macedonia, Oman, Pakistan, Paraguay, Philippines, Singapore, Thailand, Tunisia, Turkey, Ukraine, Uruguay, Venezuela, Zimbabwe
	Licensure	In use	Brazil
	Recipients of COVAX or other countries	In use	Algeria, Armenia, Libya, Mali, Moldova, Tajikistan, Timor-Leste, Togo
3. Covaxin	Emergency Use Authorization	In use	Botswana, Comoros, Guyana, India, Iran, Mauritius, Mexico, Nepal, Paraguay, Philippines, Zimbabwe

4. Covidful	Emergency Use Authorization	In use	China
5. COVIran Barekat	Emergency Use Authorization	In use	Iran
6. CoviVac	Licensure	In use	Russia
7. FAKHRAVAC	Emergency Use Authorization	In use	Iran
8. KCONVAC	Emergency Use Authorization	In use	China
9. QazVac	Emergency Use Authorization	In use	Kazakhstan, Kyrgyzstan
10. WBIP-CorV	Conditional marketing	In use	China
mRNA vaccine			
1. Comirnaty	Conditional marketing	In use	Austria, Bulgaria, Canada, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Monaco, Netherlands, Romania, San Marino, Slovakia, Slovenia, South Korea, Spain, Sweden
	Emergency Use Authorization	In use	Albania, Andorra, Argentina, Armenia, Australia, Azerbaijan, Bahamas, Bahrain, Bangladesh, Barbados, Belgium, Belize, Bhutan, Bolivia, Bosnia and Herzegovina, Botswana, Brazil, Brunei, Cabo Verde, Chile, Colombia, Cook Islands, Costa Rica, Democratic Republic of the Congo, Dominican Republic, Ecuador, Egypt, El Salvador, Gabon, Georgia, Guatemala, Honduras, Hungary, Indonesia, Iraq, Israel, Jamaica, Japan, Jordan, Kazakhstan, Kenya, Kuwait, Laos, Lebanon, Libya, Madagascar, Malaysia, Maldives, Marshall Islands, Mauritania, Mexico, Micronesia, Mongolia, Montenegro, Morocco, Namibia, New

			Zealand, Nigeria, Niue, North Macedonia, Norway, Oman, Pakistan, Panama, Papua New Guinea, Paraguay, Peru, Philippines, Poland, Portugal, Qatar, Moldova, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Serbia, Singapore, South Africa, Sri Lanka, Suriname, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Uruguay, Vietnam, Trinidad and Tobago
	Licensure	In use	Saudi Arabia, Switzerland
	Recipients of COVAX or other countries	In use	Angola, Antigua and Barbuda, Benin, Chad, Cote d'Ivoire, Dominica, Grenada, Mauritius, Rwanda, Samoa, Sierra Leone, Sudan, Togo, Uzbekistan
2. Spikevax	Conditional marketing	In use	Austria, Bulgaria, Canada, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Romania, San Marino, Slovakia, Slovenia, Spain, Sweden
	Emergency Use Authorization	Currently not in use	India
	Emergency Use Authorization	In use	Argentina, Australia, Belgium, Botswana, Colombia, Democratic Republic of the Congo, Guatemala, Haiti, Honduras, Hungary, Indonesia, Israel, Japan, Kenya, Kuwait, Libya, Marshall Islands, Micronesia, Mongolia, Nigeria, Norway, Oman, Pakistan, Paraguay, Philippines, Poland, Portugal, Qatar, South Korea, Saint Vincent and the Grenadines, Saudi Arabia, Singapore, Sri Lanka, Suriname, Switzerland, Thailand, Ukraine, United Arab Emirates, United Kingdom, United States, Uzbekistan, Vietnam
	Recipients of COVAX or other countries	In use	Fiji, Palau, Republic of the Congo, Rwanda, Tajikistan, Tunisia
Protein subunit vaccine			
1. Abdala	Emergency Use	In use	Cuba, Nicaragua, Venezuela, Vietnam

	Authorization		
2. EpiVacCorona	Emergency Use Authorization	In use	Turkmenistan
	Licensure	In use	Russia
	Recipients of COVAX or other countries	In use	Belarus
3. Zifivax	Emergency Use Authorization	In use	China, Indonesia, Uzbekistan

The data are derived from COVAX².

Target population for primary vaccination

Method to estimate the size of target population

Metrics

Some metrics have been collected to estimate target population: 1) **Total population estimates**. The age-specific population estimates by country in 2020 were mainly derived from the UN World Population Prospects, supplemented by the WorldPop datasets for some countries with age-specific proportion unavailable. 2) **The indication groups for primary vaccination**. The population groups who are eligible for a COVID-19 vaccine, recommended by governments/health departments. Indication groups varied by countries, which might be general population with a certain age group or some specific population groups, e.g., frontline workers. 3) **The contraindication groups**. The population who should not get vaccinated against COVID-19 recommended by governments/health departments, e.g., pregnant women, people with certain underlying conditions (i.e., bleeding disorders and immune suppression), and those previously infected with SARS-CoV-2. They should be excluded from the indication groups according to the vaccination policy in each country.

Definition of special population groups

Two underlying conditions are considered in this study: bleeding disorders and immune suppression. A bleeding disorder is defined as condition in which the blood's ability to clot is impaired or at thrombotic states³. Diseases that would cause bleeding disorder are considered as a bleeding problem. In the case of immune suppression, we include categories of cancers with direct immune suppression and cancers with possible immune suppression (from treatment therapy), as well as HIV/AIDS without receiving antiretroviral therapy (ART) based on Clark's method⁴. The categories and definitions of special population groups are presented in Supplementary Table 5, in which specific causes of bleeding disorders and immune suppression defined by GBD study group were listed.

Table S5. Categories and definitions of special population groups belonging to indication and contraindication lists

Population groups	Definition	Size data available	Data source
Pregnancy-related people			
Pregnant women	-	Yes	Wang W et al, BMJ ⁵
Breastfeeding (lactation) women	-	No	-
Plan to get pregnancy	-	No	-
People working at potentially greater risk of SARS-CoV-2 infection			
Healthcare workers	Including healthcare workers, nurses and midwives	Yes	Wang W et al, BMJ ⁵
People maintaining society safety and national security	Police and military	Yes	Wang W et al, BMJ ⁵

Other essential workers	People engaging in electricity, gas, water, food, steam, air conditioning, and accommodation supply; participating in sewerage, waste management, and remediation activities; involved in domestic transportation and storage	Yes	Wang W et al, BMJ ⁵
-------------------------	---	-----	--------------------------------

People at higher risk of severe COVID-19 disease			
Residents living in nursing homes/long-care homes/centers/facilities/institutions/settings or receiving home care	Elderly people receiving long-term care at a residential care facility and at home	Partially	https://www.who.int/data/maternal-newborn-child-adolescent-ageing/indicator-explorer-new/mca/percentage-of-older-people-receiving-long-term-care-at-a-residential-care-facility-and-at-home
Vulnerable people with high risk of experiencing irreversible and devastating harm from COVID-19 due to their health conditions, which included the elderly and people with underlying medical conditions.	Underlying conditions included cardiovascular disease, chronic kidney disease, chronic respiratory disease, chronic	Yes	Clark A et al. Lancet GH ⁴ Wang W et al, BMJ ⁵

* For those data that are not available, we excluded them in the calculation.

** ART coverage among people living with HIV is derived from WHO⁷ and published literature^{8,9}. We assumed that countries with such value unavailable are replaced with regional data. For example, we replaced ART coverage in Sweden with average value in Europe Region (71.0%).

Estimate peoples of population size with bleeding disorders and immune suppression

Since the prevalence of the sub-categories of each disease (bleeding disorders or immune suppression) was separately reported by GBD, one person can simultaneously suffer more than one sub-category of such disease, namely multimorbidity. Thus, we estimated the number of people who suffered at least one bleeding disorders- or immune suppression-related conditions, rather than directly adding the number of sub-categories of bleeding disorders or immune suppression.

We mainly adopted the Clark's method⁴ to estimate the size of individuals with bleeding disorders or immune suppression. Here, we briefly explain this process. First, data on the prevalence (p) of sub-categories of bleeding disorders or immune suppression were extracted by age and country from GBD 2019⁶. Then, the expected proportion of individuals with at least one bleeding problems or at least one immune suppression problems were estimated, which we refer to e here. e_{bleeding} for bleeding problems was acquired by 1 minus the probability of not having a condition in any of the 26 bleeding problems $c_{\text{bleeding}i}$: $1 - [1 - p(c_{\text{bleeding}1})] \times [1 - p(c_{\text{bleeding}2})] \times \dots \times [1 - p(c_{\text{bleeding}27})]$; and e_{immuno} for immunosuppression was acquired by 1 minus the probability of not having a condition in any of the 40 immunosuppression problems c_{immunoi} : $1 - [1 - p(c_{\text{immuno}1})] \times [1 - p(c_{\text{immuno}2})] \times \dots \times [1 - p(c_{\text{immuno}40})]$. Subsequently, the observed proportion (P) of people with at least one underlying condition was calculated by $P = e \times r$, where r was the ratio between the observed and expected percentage of individuals with at least one condition, with details in Clark et al⁴.

14 types of sub-diseases are considered as both bleeding disorders and immune suppression, including multiple myeloma, acute lymphoid leukemia, chronic lymphoid leukemia, acute myeloid leukemia, chronic myeloid leukemia, other leukemia, myelodysplastic, myeloproliferative, other hematopoietic neoplasms, liver cancer due to hepatitis B, liver cancer due to hepatitis C, liver cancer due to alcohol use, liver cancer due to other causes, and liver cancer due to nonalcoholic steatohepatitis (NASH). When calculating the proportion of individuals with at least one underlying conditions for these sub-diseases, we counted them once: $(1 - [1 - p(c_{\text{bleeding}1})] \times [1 - p(c_{\text{bleeding}2})] \times \dots \times [1 - p(c_{\text{bleeding}26})]) \times [1 - p(c_{\text{immuno}1})] \times [1 - p(c_{\text{immuno}2})] \times \dots \times [1 - p(c_{\text{immuno}26})]) \times r$.

Estimate population size of target population

We calculated the country-specific number of contraindication groups by adding the size of pregnant women, people with certain underlying conditions, and those previously infected with SARS-CoV-2 according to the national immunization policy. Then, we estimated the size of target population for primary immunization by subtracting the population of contraindications group from the population of indication groups.

COVID-19 vaccine coverage

Metrics included in the dataset of administered doses

- (1) **Number of vaccine doses administered.** The cumulative administered number of COVID-19 vaccine doses stratified by time, vaccine technical platform, and age group, which might include initial doses, additional doses, and booster doses.
- (2) **The number of people vaccinated at least one dose.** The number of people who have received the first dose of a multiple-dose vaccine or the dose administered for a one-dose vaccine.
- (3) **The number of people fully vaccinated.** The number of people who have completed their primary immunization series according to the vaccination schedule.
- (4) **The number of people receiving additional/booster doses.** The number of cumulative people receiving additional or/and booster doses.

Figure S1. Proportion administered by vaccine technical platforms

Figure S2. Proportion administered by vaccine types.

Figure S3. Date at which achieved one dose per 100 people in total population by countries.

The white areas represent countries that have not achieved one dose per 100 people or for which data are unavailable. The data shown here are as of October 7, 2021.

Figure S4. Vaccine coverage over time stratified by income groups and role of vaccine seller/donor or recipient.

Cumulative doses per 100 people by income group in total population (A) and target population (B). Cumulative doses per 100 people by role of vaccine seller/donor or recipient in total population (C) and target population (D). Income group was defined by the World Bank. The data on role of vaccine seller/donor or recipient was derived from COVAX.

Figure S5. Vaccine coverage stratified by SDI quintile and WHO region.

SDI, socio-demographic index from the Institute for Health Metrics and Evaluation (IHME)¹⁰.

Figure S6. Corrections between vaccine coverage and country-level vaccine acceptance.

Data on country-specific vaccine acceptance among general population was summarized through a rapid review by selecting one representative study for each country, based on comprehensive evaluation about study period, sampling method and representativeness of study participants.

Demand of COVID-19 vaccine doses

Method to calculate the demand of COVID-19 vaccine doses

In primary immunization, we assumed a two-dose schedule to get the total doses required for primary immunization of target population. With an exception of previous infected COVID-19 patients, if countries recommended 1 dose for those groups, one-dose schedule was used instead. The target population for primary immunization was presented in Table S2.

In additional/booster immunization programs, we assumed a one-dose schedule for those target population recommended by each country, respectively (Table S3). Generally, the target groups for an additional dose mainly contained some specific population groups, e.g., people undergoing immunosuppression, and/or elderly, and/or specific population groups at high risk of infection (such as international travelers, front-line workers). While the target groups for a booster dose may include people with specific age, and/or people undergoing immunosuppression, and/or frontline workers, and/or people receiving Sinovac/Sinopharm vaccine.

By multiplying the number of specific target population and required doses, we obtained the doses required for primary and additional/booster immunization programs, respectively. Finally, we subtracted cumulative primary doses and additional/booster doses administered in each country to get the demand of COVID-19 vaccine doses for primary and additional/booster immunization programs, respectively (Table S7).

Table S7. Global, regional, and national demand of vaccine dose.

Locations	Doses required for vaccination (millions)			Administered doses for vaccination (millions)			Current demand doses (millions)		
	Total	Primary doses	Additional/booster doses	Total	Primary doses	Additional/booster doses	Total	Primary doses	Additional/Booster doses
