

Supplementary Materials

(a)

(b)

Supplementary Figure 1 (a) SNP-level significance of OMA1, NOSTRIN, and CPNE3 genes) (b) Distribution of R-squared (square of correlation) between Array+Imputation SNPs and WES. Leading SNPs in the gene-based test are labeled with rsIDs. They have low R-squared values.

(a) SAIGE result on the fornix volume (single-variant test with array-genotyped and imputed data)

(b) SAIGE result on volume in the lower part of the thalamus (single-variant test with array-genotyped and imputed data)

(c) SKAT-CommonRare results (gene-based test with WES data)

Supplementary Figure 2 GWAS results on the average voxel values in the fornix and the lower part of the thalamus.

(a) Inverse variance weighting method

(b) Weighted median method

Supplementary Figure 3 PheWAS plots of the linear MR causal estimates from (a) Inverse variance weighting method and (b) Weighted median method

Supplementary Figure 4 A plot of p-values of the linear regression coefficients ($\Delta \text{age} \sim \text{phenotype} + \text{sex} + \text{age} + \text{PC scores} + \text{cross-validation batch}$)

Supplementary Figure 5 Plots of the nonlinear causal relationship between the biomarkers and delta age. The first row shows the plots with kernel IV regression, and the next row shows the plots with piecewise MR. The order of the plots is total choline, total lipids in small LDL, and cholesteryl esters to total lipids in very large HDL percentage.

Supplementary Figure 6 The convolutional neural network structure of the age prediction model

Supplementary Figure 7 Workflow of the linear and nonlinear MR analysis

Supplementary Table 1 SNPs in top loci associated with volume in (a) the fornix (b) the lower part of the thalamus (SAIGE, single-variant test with array-genotyped and imputed data)

(a)
