Summary of demographics and inflammation biomarkers by haplotypes. Biomarkers are presented as mean ± standard deviation (SD).

CRP – denotes – C - reactive protein, IL1β – interleukin-1 beta, IL2- interleukin-2, IL6 – interleukin-6. The body mass index (BMI) is the weight in kilograms divided by the square of the height in meters. FDR p-values control for false discovery rate at 5% using Benjamin Hochberg criteria within each subgroup of biomarkers.

For mortality comparison between haplotypes - odds ratio [aOR (95% Confidence intervals)] and p values derived from multivariable logistic regression adjusting for age, gender and BMI; and for age and BMI for gender specific mortality.
