SUPPLEMENTARY FIGURES

Figure S1: Testing strategy for the diagnosis of GAA-FGF14 ataxia

Normal alleles have (GAA)_{<250} repeats and expanded alleles have (GAA)_{≥250} repeats.

*Two expanded alleles are possible

Legend: N allele, normal allele <250 repeat units; LR-PCR, long-range polymerase chain reaction; MW, molecular weight.

Figure S2: *FGF14* allele size estimates by long-read nanopore sequencing and agarose gel electrophoresis.

(A) Passing-Bablok regression (blue line) with 95% confidence interval (shaded blue area) for allele size measured by nanopore sequencing and gel electrophoresis. The dashed black line show the identity line and the dashed red lines show the pathogenic threshold of $(GAA)_{\geq 250}$ repeats. (B) Bland-Altman plot shows the percentage difference between size estimates measured by targeted nanopore sequencing and gel electrophoresis as a function of the average of the two measurements for each sample. The dashed red lines show the mean bias between two techniques and the dashed gray lines show the limits of agreement, defined as the mean percentage difference $\pm 1.96SD$.

SUPPLEMENTARY TABLES

Table S1: Experimental conditions used for long-range PCR amplification and RP-PCRs

Long-range PCR protocols

Reagents	Primers	Cycling conditions
<ol style="list-style-type: none"> Phusion Flash High-Fidelity PCR Master Mix 2X (Thermo-Fisher) Primers 1μM gDNA 40ng 	<p>LR-PCR F: TGCAAATGAAGGAAAACCTCTT R: CAATGATGAATTAAGCAGTTCC</p> <p>fLR-PCR F: 6-FAM-TGCAAATGAAGGAAAACCTCTT R: CAATGATGAATTAAGCAGTTCC</p>	98°C x 3 min [98°C x 10 sec 65°C x 15 sec – Each 2 cycles decreasing by 1°C 72°C x 3 min] x 12 cycles [98°C x 10 sec 59°C x 15 sec 72°C x 3 min] x 20 cycles 72°C x 5 min

RP-PCR protocols

Reagents	Primers	Cycling conditions
<ol style="list-style-type: none"> Phusion Flash High-Fidelity PCR Master Mix 2X (Thermo-Fisher) F primer 1μM R primer 0.1μM M13-FAM 1μM gDNA 80ng 	<p>3'RP-PCR F: TGCCCACATAGAGCTTAGTCT R: CACGACGTTGTAAAACGAC-GAAGAAGAAGAAGAAGAAGAA M13-FAM: 6-FAM-CACGACGTTGTAAAACGAC</p> <p>5'RP-PCR F: TGCAAATGAAGGAAAACCTCTT R: CACGACGTTGTAAAACGAC-TTCTTCTTCTTCTTCTTCTTC M13-FAM: 6-FAM-CACGACGTTGTAAAACGAC</p>	98°C x 3 min [98°C x 10 sec 65°C x 15 sec 72°C x 1 min] x 35 cycles 72°C x 5 min

F, forward; gDNA, genomic DNA; PCR, polymerase chain reaction; R, reverse

Table S2: Comparison of sizing estimates by fluorescent LR-PCR (with and without correction) and targeted nanopore sequencing.

Nanopore sizing repeat number [size bp]	fluorescent LR-PCR sizing				
	[size bp]	repeat number calculated		corrected	
258	876.90	242.30	-6%	266.02	3%
260	873.71	241.24	-7%	264.83	2%
261	879.92	243.31	-7%	267.14	2%
265	874.36	241.45	-9%	265.07	0%
271	900.00	250.00	-8%	274.63	1%
271	905.57	251.86	-7%	276.70	2%
280	921.94	257.31	-8%	282.81	1%
285	955.35	268.45	-6%	295.26	4%
285	929.72	259.91	-9%	285.71	0%
289	952.90	267.63	-7%	294.35	2%
295	936.54	262.18	-11%	288.25	-2%
300	1035.55	295.18	-2%	325.15	8%
305	1003.79	284.60	-7%	313.31	3%
323	1039.49	296.50	-8%	326.62	1%
325	1057.28	302.43	-7%	333.25	3%
332	1060.24	303.41	-9%	334.36	1%
338	1041.80	297.27	-12%	327.48	-3%
347	1062.12	304.04	-12%	335.06	-3%
350	1121.00	323.67	-8%	357.01	2%
363	1173.86	341.29	-6%	376.71	4%
371	1153.54	334.51	-10%	369.13	-1%
380	1215.20	355.07	-7%	392.12	3%
383	1208.65	352.88	-8%	389.68	2%
392	1228.55	359.52	-8%	397.09	1%
396	1220.51	356.84	-10%	394.10	0%
400	1214.87	354.96	-11%	392.00	-2%

Slope: 2.6827; y-intercept: 163.2416

Internal control: (GAA)₁₀ : 180,32 bp; (GAA)₂₅₈ :876.90 bp; (GAA)₃₂₃ :1039.69 bp; (GAA)₄₀₀ :1214.87 bp.

Table S3: Suggested items to be included in the report

Range: number of repeats	Reason for referral	
	Diagnostic testing	Carrier testing
Normal -Allele 1 <250 repeat units -Allele 2 <250 repeat units	The diagnosis of <i>GAA-FGF14</i> (SCA27B, late-onset) ataxia is excluded	Patient is not a carrier of a <i>FGF14</i> GAA repeat expansion
Non-GAA expansion: ≥ 250 repeat units -Allele 1 <250 repeat units -Allele 2 ≥ 250 non-GAA repeat units	The diagnosis of <i>GAA-FGF14</i> ataxia (SCA27B, late-onset) is excluded	-
GAA expansion: ≥ 250 repeat units -Allele 1 <250 repeat units -Allele 2 ≥ 250 GAA repeat units or -Allele 1 ≥ 250 GAA repeat units -Allele 2 ≥ 250 GAA repeat units	The diagnosis of <i>GAA-FGF14</i> ataxia (SCA27B, late-onset) is confirmed. The report should mention the indication of genetic counselling for the family of the patient (offering confirmatory carrier testing)	The patient is a carrier of a <i>FGF14</i> GAA repeat expansion
