

Supplementary Material

Supplementary Tables

Table S1 Demographics and frailty indicators for the participants (N= 44,520), separated by gender. Values are reported as counts (N).

	Full cohort (N = 44,520)	Female (N = 23,013)	Male (N = 21,507)
Weight loss (N)	7,840	3,873	3,967
Exhaustion (N)	3,467	2,146	1,321
Physical activity (N)			
Low physical activity	150	98	52
Activity less than once a week	12,925	6,859	6,066
Walking pace (N)			
Slow	2,007	1,095	912
Steady	21,275	10,838	10,437
Brisk	19,346	10,049	9,297
Low grip strength* (N)	7,712	3,897	3,815

* Definition used by Fried et al.[1].

Table S2 Summary statistics for skeletal muscle and fat IDPs. Values are reported as mean and standard deviation. Significance refers to the p-value for a Wilcoxon rank-sums test, where the null hypothesis is the medians between the two groups (male and female participants) being equal.

	Full cohort (N = 44,520)	Female (N = 23,013)	Male (N = 21,507)	p-values
Muscle volume IDPs				
Left Thigh Muscle Volume (L)	4.22 ± 1.12	3.34 ± 0.51	5.16 ± 0.77	$p < 10^{-16}^{**}$
