

## Health and cost evaluation

Dear participant

On the one hand, this questionnaire aims to give you an idea of your health and, on the other hand, to evaluate your health costs.

We think that urinary incontinence could be a significant cost factor for those affected, as well as for our healthcare system. Physiotherapy is the internationally accepted first line therapy. Physiotherapy is effective and cost-saving. Cost evaluation is important to show that it makes sense to prescribe physiotherapy for incontinence.

The questionnaire consists of 3 parts:

PART 1: General questions

PART 2: Questions about your health

PART 3: Questions about your health care costs

The completion of the questionnaire takes about 15 minutes.
