

Supplementary Figure 4. TP53 variant 2-cluster model analysis. **(a)** Elbow method plot and **(b)** Silhouette score plot to determine number of clusters. **(c)** Principal component analysis (PCA) unsupervised k-means clustering performed with p53 mutagenesis cellular functional assay measurements. **(d)** Codon distributions and frequencies of TP53 variant clusters with intrinsically disordered regions shown below (determined using IUPred3 (Erdos 2021 Nucleic Acids Res)). **(e)** Heatmap displaying the codon frequencies and distributions of TP53 variant clusters. **(f)** Bar graph showing the structural motifs where variant clusters reside. **(g)** Violin plots displaying the functional consequences of variants within each cluster (dotted line represents wild-type p53). *** $p<0.0001$, Mann-Whitney U test. **(h)** Alluvial plot comparing the variant clusters between the 2- and 5-cluster models.
