

## Models diagnostics

Residuals: Pearson's residuals for each spatial unit, model (null model M1, covariates only M2, spatial effects only M3, full model M4) and period (low incidence, growth, peak and decrease, stabilization).

Predictive check: position of the observed incidence for a given spatial unit compared to the predicted values (computed from each chain iteration), for each spatial unit, model, and period. The observed value for the spatial units in red or blue are lower than the 5th percentile or greater than the 95th percentile of the predicted values, indicating an inadequate prediction.
