

Table S1. Parameter values describing mosquito bionomics, vector control and malaria epidemiology.

Symbol	Parameter	Value	Reference
Mosquito bionomics			
β	Egg production per adult female (per day)	21	[1]
T_E	Mean duration of egg stage (days)	3	[1]
T_L	Mean duration of larval stage (days)	7	[1]
T_P	Mean duration of pupal stage (days)	1	[1]
$CV(T_E)$	Coefficient of variation, egg stage	0.2	[2]
$CV(T_L)$	Coefficient of variation, larval stage	0.3	[2]
$CV(T_P)$	Coefficient of variation, pupal stage	0.2	[2]
K	Larval carrying capacity	Time-varying	[3]
μ	Adult mosquito mortality rate	Time-varying	[3]
f	Blood feeding rate	1/3	[4]
Q	Human blood index	0.9	[4]
Vector control			
θ_B	Bites taken on humans while they are in bed as a proportion of all bites taken on humans	0.89	[5,6]
θ_I	Bites taken on humans while they are indoors as a proportion of all bites taken on humans	0.97	[5,6]
r_{LLIN}	Probability of repeating a feeding attempt in the presence of long-lasting insecticide-treated nets	0.56	[5,6]
r_{IRS}	Probability of repeating a feeding attempt in the presence of indoor residual spraying	0.60	[5,6]
s_{LLIN}	Probability of feeding and surviving in the presence of long-lasting insecticide-treated nets	0.03	[5,6]
s_{IRS}	Probability of feeding and surviving in the presence of indoor residual spraying	0	[5,6]
Malaria epidemiology			
N_H	Human population size	1,000	
ν	Proportion of severe malaria cases that result in death	0.215	[7]
