	No. (%) of participants			
	Total n = 608			
	Collecting research questions n = 297 (48.8%)	Interim Prioritisation n = 290 (47.6%)	Workshop 1 n = 11 (1.8%)	Workshop 2 n = 10 (1.6%)
Table 1. Participant Characteristics				
Participants (% of sub-sample)				
Person living with chronic MSK pain	230 (77.4)	147 (50.6)	-	8 (80)
Career to a person living with chronic MSK pain	1 (0.3)	8 (2.7)	-	2 (20)
Medical Doctor	20 (6.7)	25 (8.6)	4 (36.3)	-
Physiotherapist	30 (10.1)	97 (33.4)	3 (27.2)	-
Other HCPs (Psychologist, Nurse, Chiropractor, Social worker, Researcher)	16 (5.3)	13 (4.4)	4 (36.3)	-
Sex				
Female	177 (59.5)	147 (50.7)	6 (54.5)	4 (40)
Male	120 (40.5)	143 (49.3)	5 (45.4)	6 (60)
Age				
18-30	26 (8.7)	51 (17.5)	1 (9.0)	1 (10)
31-40	65 (21.8)	57 (19.6)	5 (54.5)	2 (20)
41-50	83 (27.9)	81 (27.9)	3 (27.2)	3 (30)
51-60	79 (26.5)	60 (20.6)	1 (9.0)	2 (20)
61-70	33 (11.1)	29 (10)	1 (9.0)	1 (10)
71-80	3 (1.0)	7 (2.4)	-	1 (10)
80+	8 (2.6)	5 (1.7)	-	-
Region				
Region of Northern Jutland	64 (21.5)	61 (21.0)	2 (18.1)	2 (20)
Region Central Denmark	60 (20.2)	93 (32.0)	2 (18.1)	1 (10)
Region Southern Denmark	58 (19.5)	51 (17.5)	2 (18.1)	3 (30)

Region Zealand	56 (18.5)	22 (7.5)	2 (18.1)	3 (30)
Region Capital	59 (19.8)	58 (20)	3 (27.2)	1 (10)
Ethnicity				
Danish	250 (84.1)	266 (91.7)	9 (81.8)	3 (30)
Immigrant, non-western	12 (4.0)	5 (1.7)	1 (9.0)	1 (10)
Immigrant, western	2 (0.6)	-	1 (9.0)	2 (20)
Descendant, non-western	1 (0.3)	-	-	2 (20)
Descendant, western	18 (6.0)	2 (0.6)	-	2 (20)
Do not want to state	14 (4.7)	17 (5.8)	-	-
Work Situation (People living with Atraumatic Shoulder Pain)				
Student	18 (6.0)	37 (12.7)	-	2 (20)
Full-time employed	177 (59.5)	165 (56.8)	10 (91)	5 (50)
Part-time employed	36 (12.1)	41 (14.1)	1 (9.0)	1 (10)
Sick Leave	51 (17.1)	32 (11.0)	-	2 (20)
Retired/early retirement/or similar	12 (4.0)	5 (1.7)	-	-
Unemployed	3 (1.0)	10 (3.4)	-	-
Education (People living with Atraumatic Shoulder Pain)				
No vocational education	16 (5.3)	10 (3.4)	-	2 (20)
One or more short courses	18 (6.0)	2 (0.6)	-	-
Short education (Under 1 year)	5 (1.6)	2 (0.6)	-	-
Vocational education (e.g., Hairdresser, Secretary, Craftsman)	65 (21.8)	68 (23.4)	-	2 (20)
Short Academy Profession Degree (e.g., Police, Multimedia-designer)	30 (10.1)	25 (8.6)	-	2 (20)
Intermediate Academy Profession Degree (e.g., Nurse, Physiotherapist, Teacher)	70 (23.5)	25 (8.6)	-	1 (10)
Long Academy Profession Degree (Medical Doctor, Pscyhologist, Engineer)	36 (12.1)	16 (5.5)	-	1 (10)

Table 2. Main themes derived from consultation and collation

Main themes derived from consultation and collation	
<p>Aids Knowledge of which aids are available and the effect of these aids.</p> <p>Diagnosis Knowledge of how we can make a diagnosis more precisely and faster for the individual.</p> <p>Economy Knowledge of how shoulder pain affects finances for the individual and society.</p> <p>Education Knowledge of how more knowledge about shoulder pain can improve patients' progress.</p> <p>End-user Involvement Knowledge of how patients can feel more heard by the health professionals and become more involved in their own process.</p> <p>Individual Knowledge of how shoulder pain affects the individual's quality of life and time with family.</p> <p>Imaging Knowledge of the role of imaging (e.g., MR scanner, ultrasound) in the treatment of shoulder pain.</p> <p>Mechanism of Action Knowledge of which mechanisms cause shoulder pain. Prevention - Knowledge of how we can prevent shoulder pain.</p>	<p>Patient Journey Knowledge of how the patient process can be improved and made more efficient and how patients can avoid being stigmatised.</p> <p>Prognosis Knowledge of how shoulder pain develops and when you can expect improvement/disappearance.</p> <p>Research Knowledge of how healthcare professionals can be up to date on the latest research and how patients with shoulder pain can help research.</p> <p>Risk Factors Knowledge of which factors put people at risk of developing shoulder pain</p> <p>Self-management Knowledge of how patients can best manage their own pain.</p> <p>Sleep Knowledge of how sleep affects shoulder pain.</p> <p>Treatment Knowledge of how we best treat shoulder pain.</p> <p>Work Knowledge of how the job situation affects shoulder pain and how can work be adapted to one's shoulder pain?</p>

Table 3. Top 25 Research Questions based on Interim Prioritization

No.	Research Question	Scoring	Corresponding Main Theme
1.	Which exercise regimen is the most effective for treating people with atraumatic shoulder pain?	95	Treatment
2.	How can people with atraumatic shoulder pain learn to manage their own pain, and which strategies can facilitate this process?	88	Self-management
3.	How effective is painful exercising compared to non-painful exercising for treating people with atraumatic shoulder pain?	71	Treatment
4.	How can atraumatic shoulder pain be prevented?	69	Treatment
5.	Which exercise dose is the most effective for treating people with atraumatic shoulder pain?	69	Treatment
6.	Who benefits from surgery, and who doesn't?	63	Treatment
7.	How can the return-to-previous function be predicted?	62	Prognosis
8.	What is the effectiveness of passive modalities such as (ultrasound, manual therapy etc.)?	60	Treatment
9.	What is the risk of developing post-operative pain, and who develops it?	56	Risk Factors
10.	Which mechanism is responsible for developing atraumatic shoulder pain?	53	Mechanism of Action
11.	How can return-to-previous activities be predicted?	53	Prognosis
12.	What is the effectiveness of load management for treating people with atraumatic shoulder pain?	53	Treatment
13.	How can we translate evidence into practice?	51	Research
14.	How do biological changes (e.g., inflammation, previous injuries, hormones) influence the lived experience?	49	Mechanism of Action
15.	Which coping strategies support people with atraumatic shoulder pain in managing their pain?	48	Self-management
16.	What is the effectiveness of shared decision-making, and how can it be ensured that the choice of treatments has been decided based on the alliance between people with atraumatic shoulder pain and healthcare practitioners?	47	End-user Involvement
17.	What is the effectiveness of self-management compared to supervised/group-based rehabilitation?	47	Treatment
18.	How much of improvements in health over time can be attributed to natural healing processes?	46	Mechanism of Action
19.	How does atraumatic shoulder pain influence quality of life (including family life and mental health)?	44	Mechanism of Action
20.	How can a return to work be predicted?	43	Work
21.	How does job adaptability and flexibility influence the prognosis for people with atraumatic shoulder pain?	41	Work, Prognosis
22.	How can people with atraumatic shoulder pain and healthcare practitioners be educated to ensure the best management of NTSP?	37	Education
23.	What is the mechanism for how impaired sleep can worsen atraumatic shoulder pain symptoms?	35	Sleep, Mechanism of Action
24.	How can a good therapeutic alliance be created, and how important is it to the patient journey?	35	Patient Journey
25.	What is the effectiveness of patient education for managing atraumatic shoulder pain?	35	Education

*** Score indicates the number of times the questions have been rated very important or important**

Table 4. Top 10 Prioritized Research Questions

Top 10 Research Priorities for Atraumatic Shoulder Pain		Voting 1	Voting 2	Voting 3	Voting 4	Corresponding Theme
		Place on Top-25	Workshop 1 (HCP)	Workshop 2 (ATSP and careers)	Vote Total*	
1	How can we improve the translation of research into clinical practice?	13	5	4	9	Research
2	How can we prevent atraumatic shoulder pain?	4	4	4	8	Treatment
3	Who benefits from surgery, and who does not?	6	4	2	6	Treatment
4	Which exercise type and dose is the most effective?†	1 and 5	4	2	6	Treatment
5	How do patients learn to self-manage their pain, and how can it be facilitated?	2	3	4	7	Self-management
6	Which mechanism(s) is responsible for the development?	10	3	3	6	Mechanism of Action
7	What is the effect of patient education?	25	1	3	4	Education
8	What is the effect of self-management compared to supervised treatment?	17	1	2	3	Self-management
9	What is the effectiveness of exercise with pain compared to without pain?	3	1	1	2	Treatment
10	Which coping strategies support patients in managing their pain?	15	1	0	1	Self-management

W = workshop, HCP = healthcare practitioners, ATSP = people with atraumatic shoulder pain

***Votes total is based on the sum of the rating from workshop 1 and 2.**

† This question were collated based on responses from workshop 1 and 2
