1  //
2  //
3  /* This do file
4      1. imports imaging reads and clinical findings that have previously
      been manually extracted into database elements (.mer file)
5
6      2. Merges .dta file that contains the Vital signs and demographic data
      that can easily be done from EPIC
7
8      3. Derives the variables needed for and performs the primary analysis
9
10     4. Derives the Variables needed for Table 1.
11
12
13
14 Two other dof files will be needed.
15     One to convert the raw textfile for 2 above into stata format.
16     Second one to convert virus results data into wide format that will be
      needed for Table 1.
