

Supplemental Figure 1. Distribution of mutations for the top 20 mutated sites found in SARS-CoV2 genomes sampled from Cedars Sinai Medical Center patients in Los Angeles, USA, displayed as the nucleotide changes observed and the occurrence within all samples.

Supplemental Figure 2. Phylogenetic tree plotting 144 isolates collected from Cedars Sinai Medical Center based on their date of collection.

Supplemental Figure 3. Phylogenetic tree plotting the variant C18877T in the SARS-CoV-2 genome of 144 isolates collected from Cedars Sinai Medical Center. . Each nucleotide has a corresponding color code (A-blue, G-green, C-orange, T-red), Each histogram depicts one isolated cluster in which only those isolates contain this variant change.

Supplemental Figure 4. Distribution of 3554 SARS-CoV-2 genomes used in this study by location.
