Supplementary Figure 1. Locus Zoom plot of the genome-wide significant hits.

Supplementary Figure 2. GSMR analysis of selected LCV significant traits

Pickrell plots show the results of a GSMR analysis to further assess evidence for causality from the LCV results. The x-axis depicts the effect sizes for SNPs associated with an exposure of interest, the y axis shows those SNP's effect sizes on pneumonia. A significant slope (positive or negative) could be considered evidence for causality.
