29 Figure S1: Hematoxylin-eosin (H&E) and immunohistochemistry (IHC)

30 images of lung tissues from five COVID-19 patients.

31 Shown are H&E staining illustrating significant areas of lung tissues for all cases 32 described in the study (Panel A). Case 1: Acute and organizing diffuse alveolar 33 damage (DAD). Airspace filling with granulation-like tissue admixed with rare 34 scattered hyaline membranes (top image, black arrow). Mild perivascular 35 lymphocytic inflammation, but no vasculitis is seen (100x). Lymphocytes are 36 indicated with red arrows (bottom image, 600x). Case 2: Lung parenchyma with 37 hemorrhagic infarct. Thromboembolus in the right main pulmonary artery was 38 grossly identified (top image, 100x). Langhans giant cell can be observed 39 (asterisk, bottom image, 600x). Case 3: Acute DAD damage with hyaline 40 membranes, atypical pneumocytes and scattered lymphocytes (top image, 100x). 41 Presence of hemosiderin-laden macrophage (red arrow, bottom image, 600x). 42 Case 4: Early exudative phase of DAD showing vascular congestion and rare 43 hyaline membranes (black arrow, top image, 100x). Presence of lymphocytes 44 (white arrow) and macrophages (red arrow) infiltration (bottom image, 600x). 45 Case 5: DAD with hyaline membranes, atypical pneumocytes and scattered lymphocytes (top image, 100x). Presence of alveolar macrophages (asterisk) 46 47 (bottom image, 600x). Shown are IHC detection images of SARS-CoV-2 infection 48 using antibodies against spike protein (receptor binding domain, RBD) or 49 nucleocapsid (NC) protein (100x) (Panel B). Different immune cells infected by 50 SARS-CoV-2 were observed including monocytes (white arrow), macrophages

51	(black arrow) and lymphocytes (black arrowhead) in all cases (600x). Shown are
52	IHC detection images of ACE2 protein expression in all lung tissues (Panel C).
53	Different immune cells identified as lymphocytes (black arrow in case 1) (bottom
54	image, 600x), and monocytes (black arrowhead), macrophages (black arrow)
55	and neutrophils (red arrowhead) illustrated in case 2 (bottom image, 600x). A
56	monocyte not expressing ACE2 (black arrow) is seen side-by-side with a
57	neutrophil expressing ACE2 (black arrowhead) in case 5 (bottom image, 600x).
58	
59	Figure S2: IHC staining of markers of immune cells in lung tissues from
60	COVID-19 patients.
61	Shown are monocytes and macrophages (CD68 ⁺ and CD163 ⁺) (Panel A); B cells
62	(CD19 ⁺ and CD20 ⁺) (Panel B); different markers of T cells including T cell
63	receptor (CD3 ϵ^{+}), helper cell (CD4 ⁺), cytotoxic T cell (CD8 ⁺), T regulatory cell
64	(FOXP3), and lymphocyte common antigen (CD45 ^{$+$}) (Panel C).
65	
66	Figure S3: Images of multicolor immunofluorescence detection for ACE2
67	(pseudo color red) and SARS-CoV-2 S1 protein (RBD, pseudo color green)
68	in all cases of COVID-19 patients.
69	DAPI stained nuclei (pseudo color blue).
70	
71	Figure S4: Images of multicolor immunofluorescence staining of ACE-2,
72	SARS-CoV-2 proteins and cellular markers in lung tissues from COVID-19
73	patients.

74	Shown are alveolar epithelial type II / pneumocytes type II cells (AT2) (pseudo
75	color green), ACE2 (pseudo color red) and SARS-CoV-2 S1 protein (RBD,
76	pseudo color white) (Panel A); Tyr- α -tubulin (pseudo color red) and SARS-CoV-2
77	NC protein (pseudo color green) (Panel B); MUC5AC (goblet cells, pseudo color
78	green), ACE-2 (pseudo color red) and SARS-CoV-2 S1 protein (RBD, pseudo
79	color white) (Panel C); and MUC5B (club-like cells, pseudo color green), ACE2
80	(red) and SARS-CoV-2 S1 protein (RBD, pseudo color white) (Panel D). Nuclei
81	were stained with DAPI (pseudo color blue).
87	

83 Figure S5: Images of multicolor immunofluorescence staining of ACE-2,

84 SARS-CoV-2 NC protein and endothelial cell markers.

85 Shown are CD34 (pseudo color green), ACE2 (red) and SARS-CoV-2 NC protein

86 (pseudo color white) (Panel A); and CD31 (pseudo color red) and SARS-CoV-2

NC protein (pseudo color green) (Panel B). Nuclei were stained with DAPI

88 (pseudo color blue).

89

90 Figure S6: Images of multicolor immunofluorescence staining of ACE2,

91 SARS-CoV-2 S1 protein (RBD) and markers of innate immune response

92 cells in lung tissues from COVID-19 patients.

93 Shown are CD68, a monocytic lineage marker (pseudo color green), ACE2

94 (pseudo color red) and S1 protein (pseudo color white) (Panel A); CD163, a

95 macrophage M2 marker (pseudo color green), ACE2 (pseudo color red) and S1

96 protein (pseudo color white) (Panel B); elastase 2 (ELA-2), a neutrophil marker

97	(pseudo color green), ACE2 (pseudo color red) and S1 protein (pseudo color
98	white) (Panel C); and CD56, a NK cell marker (pseudo color red) and S1 protein
99	(pseudo color green). Nuclei were stained with DAPI (pseudo color blue) (Panel
100	D).

102 *Figure S7:* Images of multicolor immunofluorescence staining of B cell

103 marker CD20 (pseudo color green), ACE2 (pseudo color red) and SARS-

104 CoV-2 NC protein (pseudo color white) in lung tissues from COVID-19

105 patients.

106 Nuclei were stained with DAPI (pseudo color blue).

107

108 *Figure S8:* Images of multicolor immunofluorescence staining of ACE2,

109 SARS-CoV-2 NC protein and markers of T cells in lung tissues from COVID-

- 110 **19 patients**.
- 111 Shown are CD4, a T helper cell marker (pseudo color green), ACE2 (pseudo

112 color red) and NC protein (pseudo color white) (Panel A); CD8, a cytotoxic T cell

113 marker (pseudo color green), ACE2 pseudo color (red) and NC protein (pseudo

114 color white) (Panel B); CD3ɛ, a T cell receptor marker (pseudo color green),

115 ACE2 (pseudo color red) and NC protein (pseudo color white) (Panel C); HLA-

- 116 DR, a B and T cell activation marker (pseudo color green), ACE2 (pseudo color
- 117 red) and NC protein (pseudo color white) (Panel D); and CD4 (pseudo color
- green), ACE2 (pseudo color red) and NC protein (pseudo color white) of cases 1

- and 4 showing distinct intact *versus* fragmented membrane patterns of CD4,
- 120 respectively. Nuclei were stained with DAPI (pseudo color blue) (Panel E).
- 121
- 122 Figure S9: Images of multicolor immunofluorescence staining of IL-6,
- 123 SARS-CoV-2 S1 protein (RBD), and cellular markers in lung tissues from
- 124 **COVID-19 patients.**
- 125 Shown are IL-6 (pseudo color red) and S1 protein (pseudo color green) in lung
- 126 tissues from all COVID-19 cases (Panel A); and representative images CD20
- 127 (pseudo color red), CD68 (pseudo color red) or CD163 (pseudo color red), and
- 128 IL-6 (pseudo color green) of case 1 (Panel B). Nuclei were stained with DAPI
- 129 (pseudo color blue).
